Proposed Methodology

- In this work, we propose a method to detect and to rank important news stories in web environment
- We use google search to fetch news from all website.
- Then we analyze the total views of all website using piwik analytics.
- After that we separate the title and content of the news articles and display it.

Flowchart

Twitter Database

Twitter API → Article Dataset

False

Title

End of article dataset

Hit Search

True

URL

Sort article dataset According to views
